TASK 1

Name: Bharathidasan B

Mail-Id: bharathidasan9629@gmail.com

Task Title: Responsive Company Member Team Page

Task Description: To develop a Responsive web page for the Company Members Team Page. The design reference is provided in the attached file named "designed-1." Utilize HTML and CSS to bring this design to life, ensuring responsiveness across various devices.

Steps Taken: Building the skeleton of the webpage using HTML. I added all the required elements in the page using the design reference. Adding styles to the HTML page. Making correction and customizing the design using CSS. Finally trying to make the exact copy of the reference page in my page.

Challenges Faced: Writing the HTML tags are not that much tough. But in writing the CSS I faced a issue, horizontal line in the page was disappeared so then I fixed the width of the line then the issue is solved And then I had issue in wrapping the content then I solved using display flex and flex wrap as wrap the issue was solved. These are the major issues I faced during the webpage for a desktop site. In the mobile version there is no big issue the font of the paragraph is little bit smaller otherwise all the things are nice in mobile version

Solutions Implemented: I solve the <hr> tag issue by using width. Wrapping issue is solved by flex wrap as wrap.

Learnings: New CSS tags like flex wrap and flex direction

Project Update: I Have created a Responsive Company Member Team Page and the next move to the task 2.
